Google Cloud Print App

Highlight Feature

> Print from mobile devices while you are on the move

> Remote printing from Chrome Book, Windows or Mac computers without having to install a printer driver

> Utilise a Toshiba MFP even when not connected to the network

Your challenge
The need to print from portable devices such as tablets and smart phones is increasing. However, it can be frustrating to make this work as traditionally drivers need to be installed prior to printing. In addition, guest users who are outside the network may not be able to print, resulting in loss of productivity and efficiency.

Our solution
Integration of the Toshiba e-BRIDGE Next MFP and Google Cloud Print has made difficult tasks possible. Now you can print from mobile devices and notebooks, even if you are not in the office or on the network. And all this without having to install a printer driver.

Boost your efficiency!

TOGETHER INFORMATION

Your benefits

Whether you're in the office, school, or even on the road, you can send a print job from your device, even if you use multiple devices and multiple platforms. Integration of the Toshiba e-BRIDGE Next MFP and Google Cloud Print is the answer to your printing needs, anytime, anywhere!

By registering the Toshiba e-BRIDGE Next MFP in the Google Cloud Print account, you can print from Android tablets and phones, iPads and iPhones, Chrome Books, Windows and Mac PCs, without need to be on the network environment or install the printer driver.

You can also send a print job to the MFP from a distant location, enabling the sharing of data.
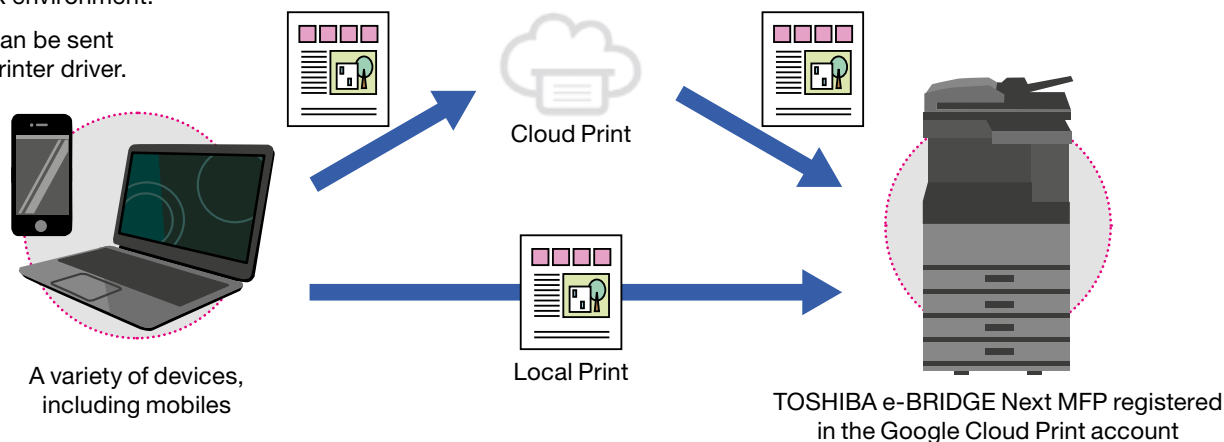

Where to use

Efficient data verification and information sharing has become a concern in today's fast-paced work environment. It is necessary to print from a variety of portable devices as well as print by remote access.

> Education
  - Students and staff are able to print data using personal computers and mobile devices, regardless of whether they are connected to the school network or not.
> General office
  - Temporary users, such as business travellers who are not on the network or have not installed the printer driver can print.
  - Portable devices that are not usually connected to the company's network can still print.
> Hotel
  - Hotel guests can print from their mobile devices.

Mobility and flexibility

With cloud print apps you can...

- Print jobs can be sent from outside the network environment.
- Print jobs can be sent without a printer driver.

Cloud Print

Local Print

A variety of devices, including mobiles

TOSHIBA e-BRIDGE Next MFP registered in the Google Cloud Print account
