

## Standard Toshiba Consumables

**Fuser kit-** Melts the toner and developer into the paper, the white rollers are the felt cleaning rollers. The kits melt the toner of temps upwards of 180deg C.

**Developer Assembly-** Holds the Drum and main charge kit which attracts the toner to the drum and then onto the paper. It too has clean kits that form a preventative kit.

**Toner and developer-** Toshiba use a separate toner and developer kit that ensures solid blacks.

**Toner Vacuum Cleaner-** Toshiba techs all carry a vacuum cleaner which they use on a regular basis to keep your machine clean internally, this reduces toner to build up in areas and reduces paper jams and down time

Every MFD device has a sets of consumables to keep the devices clean and working.

**Service parts and consumables**
